Genomic achievements since the Human Genome Project

Phase I HapMap

First genome-wide

Chimpanzee genome sequence

association study published

genome sequence Phenotypes (dbGaP) launched

genome sequence

Han Chinese genome sequence

sequenced using new technologies

Completion of the Mammalian Gene Collection (MGC)

Platypus genome sequence

International data release workshop

Bovine genome sequence

First human methylome map

biobank*

nature

Southern African genome sequences

association study

modENCODE publications

Neanderthal genome sequence

1000 Genomes pilot project

exome sequencing

First personal genome

breakthrough of the year

Wellcome Trust Case Control Consortium publication

ENCODE pilot project complete

First personal genome sequenced

analysis of glioblastoma

Genetic Information Nondiscrimination Act (GINA)

Korean genome sequence

First direct-to-consumer

whole-genome test
